Notes annexed to and forming part of the consolidated financial statements**3.2 Retirement benefit plans****3.2.1 Defined contribution plans**

Payments to defined contribution plans i.e., Company's contribution to superannuation fund, employee state insurance and other funds are determined under the relevant schemes and / or statute and charged to the Statement of Profit and Loss in the period of incurrence when the services are rendered by the employees.

The total expense recognised in profit or loss of Rs. 6.12 crores (2022-23: Rs. 7.45 crores) represents contribution paid/ payable to these schemes by the Company at rates specified in the schemes.

3.2.2 Defined benefit plans

The Company has an obligation towards gratuity as per payment of gratuity act, 1972, a defined benefit retirement plan covering eligible employees. The plan provides for a lump-sum payment to vested employees at the time of retirement, separation, death while in employment or on termination of employment of an amount equivalent to 15 days salary payable for each completed year of service. Vesting occurs upon completion of five years of service. The Company accounts for the liability for gratuity benefits payable in the future based on an actuarial valuation. The Company makes annual contributions through trusts to a funded gratuity scheme administered by the Life Insurance Corporation of India.

Company's liability towards gratuity (funded), provident fund, other retirement benefits and compensated absences are actuarially determined at the end of each reporting period using the projected unit credit method as applicable.

These plans typically expose the Company to actuarial risks such as: investment risk, interest rate risk, longevity risk and salary risk.

Investment risk	The present value of the defined benefit plan liability is calculated using a discount rate determined by reference to the market yields on government bonds denominated in Indian Rupees. If the actual return on plan asset is below this rate, it will create a plan deficit.
Interest rate risk	A decrease in the bond interest rate will increase the plan liability. However, this will be partially offset by an increase in the return on the plan's debt investments.
Longevity risk	The present value of the defined benefit plan liability is calculated by reference to the best estimate of the mortality of plan participants both during and after their employment. An increase in the life expectancy of the plan participants will increase the plan's liability.
Salary risk	The present value of the defined benefit plan liability is calculated by reference to the future salaries of plan participants. As such, an increase in the salary of the plan participants will increase the plan's liability.

Notes annexed to and forming part of the consolidated financial statements**3.2 Retirement benefit plans (continued)**

3.2.3 The principal assumptions used for the purposes of the actuarial valuations were as follows:

	As at March 31, 2024	As at March 31, 2023
Gratuity		
Discount rate	6.98%	7.14%
Expected rate of salary increase	8.00%	10.00%

The Company funds the cost of the gratuity expected to be earned on a yearly basis to Life Insurance Corporation of India, which manages the plan assets. During the year the company has transferred Rs. 0.3 crores worth of plan assets to OHM global mobility limited.

The actual return on plan assets was Rs. 0.18 crores (2022-23: Rs. 0.14 crores).

3.2.8 Significant actuarial assumptions for the determination of the defined obligation are discount rate and expected salary increase. The sensitivity analysis below has been determined based on reasonably possible changes of the respective assumption occurring at the end of the reporting period.

	As at March 31, 2024	As at March 31, 2023
	Rs. Crores	Rs. Crores
Gratuity		
If the discount rate is 50 basis points higher/lower, the defined benefit obligation would:		
decrease by	0.04	0.05
increase by	0.04	0.05
If the expected salary increases/decreases by 50 basis points, the defined benefit obligation would:		
increase by	0.05	0.06
decrease by	0.05	0.05
Compensated absences		
If the discount rate is 50 basis points higher/lower, the defined benefit obligation would:		
decrease by	0.03	0.05
increase by	0.03	0.05
If the expected salary increases/decreases by 50 basis points, the defined benefit obligation would:		
increase by	0.03	0.06
decrease by	0.03	0.05

The sensitivity analysis presented above may not be representative of the actual change in the defined benefit obligation, since the above analysis are based on change in an assumption while holding other assumptions constant. In practice, it is unlikely that the change in assumptions would occur in isolation of one another as some of the assumptions may be correlated.

Furthermore, in presenting the above sensitivity analysis, the present value of the defined benefit obligation has been calculated using the projected unit credit method at the end of each reporting period, which is the same as that applied in calculating the defined benefit obligation liability recognised in the balance sheet.

There was no change in the methods and assumptions used in preparing the sensitivity analysis from previous year.

The Company expects to make a contribution of Rs. 0.01 crores (March 2023: Rs. 0.59 crores) to the defined benefit plans (gratuity - funded) during the next financial year.

Notes annexed to and forming part of the consolidated financial statements**3.6 Financial Instruments****3.6.1 Capital management**

The Company manages its capital to ensure that it will be able to continue as going concern while maximising the return to stakeholders through the optimisation of the debt and equity balance.

The Company determines the amount of capital required on the basis of annual master planning and budgeting and five year's corporate plan for working capital, capital outlay and long-term product and strategic involvements. The funding requirements are met through equity, internal accruals and a combination of both long-term and short-term borrowings.

The Company monitors the capital structure on the basis of total debt to equity and maturity profile of the overall debt portfolio of the Company.

The quarterly returns or statements of current assets filed by the Company with Banks and Financial Institutions are in agreement with the books of account.

The Company is required to comply with certain covenants under the facility agreements executed for its borrowings, which were either complied or consent obtained for continuing the facility.

3.6.2 Financial risk management

In course of its business, the Company is exposed to certain financial risks that could have significant influence on the Company's business and operational / financial performance. These include market risk (including currency risk, interest rate risk and other price risk), credit risk and liquidity risk.

The Board of Directors reviews and approves risk management framework and policies for managing these risks and monitors suitable mitigating actions taken by the management to minimise potential adverse effects and achieve greater predictability to earnings.

In line with the overall risk management framework and policies, the treasury function provides services to the business, monitors and manages through an analysis of the exposures by degree and magnitude of risks.

The Company uses derivative financial instruments to hedge risk exposures in accordance with the Company's policies as approved by the board of directors.

(A) Market risk

Market risk represent changes in market prices, liquidity and other factors that could have an adverse effect on realisable fair values or future cash flows to the Company. The Company's activities expose it primarily to the financial risks of changes in foreign currency exchange rates and interest rates as future specific market changes cannot be normally predicted with reasonable accuracy.

The treasury function provides services to the business, co-ordinates access to domestic and international financial markets, monitors and manages the financial risks relating to the operations through internal risk reports which analyse exposures by degree and magnitude of risks. These risks include market risk (including currency risk, interest rate risk and other price risk), credit risk and liquidity risk.

3.6 Financial Instruments continued...

(1) Foreign currency risk management:

The Company undertakes transactions denominated in foreign currencies and thus it is exposed to exchange rate fluctuations. The Company actively manages its currency rate exposures, arising from transactions entered and denominated in foreign currencies, through a centralised treasury division and uses derivative instruments such as foreign currency forward contracts and currency swaps to mitigate the risks from such exposures. The use of derivative instruments is subject to limits and regular monitoring by Management.

The carrying amounts of the Company's foreign currency denominated monetary assets and monetary liabilities at the end of the reporting period are as follows:

As on March 31, 2024 (all amounts are in equivalent Rs. in Crores):

Currency	Liabilities			Assets			Net overall exposure on the currency - net assets / (net liabilities)

Notes annexed to and forming part of the consolidated financial statements**3.6 Financial Instruments continued...****Foreign currency sensitivity analysis:**

Movement in the functional currencies of the various operations of the Company against major foreign currencies may impact the Company's revenues from its operations. Any weakening of the functional currency may impact the Company's export proceeds, import payments and cost of borrowings.

The foreign exchange rate sensitivity is calculated for each currency by aggregation of the net foreign exchange rate exposure of a currency and a parallel foreign exchange rates shift in the foreign exchange rates of each currency by 2%, which represents Management's assessment of the reasonably possible change in foreign exchange rates.

The sensitivity of profit or loss to changes in the exchange rates arises mainly from foreign currency denominated financial instruments and the impact on the other components of equity arises from foreign currency forward contracts designated as cash flow hedges. The following table details the Company's sensitivity movement in the increase / decrease in foreign currencies exposures (net):

No foreign currency forward contracts outstanding at the end of the reporting period and for Mar 31 2023.

Notes annexed to and forming part of the consolidated financial statements**3.6 Financial Instruments continued...****(2) Interest rate risk management:**

The Company is exposed to interest rate risk pertaining to funds borrowed at both fixed and floating interest rates. The risk is managed by the Company by maintaining an appropriate mix between fixed and floating rate borrowings by the use of interest rate swap contracts. Hedging activities are evaluated regularly to align with interest rate views and defined risk appetite, ensuring the most cost-effective hedging strategies. Further, in appropriate cases, the Company also effects changes in the borrowing arrangements to convert floating interest rates to fixed interest rates.

The exposure of company's borrowings to interest rate changes at the end of the reporting period are as follows:

	March 31, 2024 Rs. Crores	March 31, 2023 Rs. Crores
Variable rate borrowings excluding preference shares	1,106.20	1,450.40
Fixed rate Borrowings	-	-
	1,106.20	1,450.40

Interest rate sensitivity analysis

The sensitivity analysis below has been determined based on the exposure to interest rates at the end of the reporting period. For floating rate liabilities, the analysis is prepared assuming that the amount of the liability as at the end of the reporting period was outstanding for the whole year. A 25 basis point increase or decrease is used when reporting interest rate risk internally to key management personnel and represents Management's assessment of the reasonably possible change in interest rates.

If interest rates had been 25 basis points higher/ lower, the Company's profit / loss for the year ended March 31, 2024 would decrease / increase by Rs.4.49 crores (March 31, 2023 decrease / increase by Rs. 3.63 crores). This is mainly attributable to the Company's exposure to interest rates on its variable rate borrowings.

(3) Foreign currency and interest rate sensitivity analysis for swap contracts:

The Company has not taken foreign currency and interest rate swap (FCIRS) contracts for hedging its foreign currency and interest rate risks related to certain external commercial borrowings.

Notes annexed to and forming part of the consolidated financial statements

3.6 Financial Instruments continued...

(4) Equity price risk:

Equity price risk is related to the change in market reference price of the investments in quoted equity securities. The fair value of some of the Company's investments exposes the Company to equity price risks. In general, these securities are not held for trading purposes.

(B) Credit risk

Credit risk refers to the risk that a counterparty will default on its contractual obligations resulting in financial loss to the Company. The Company has adopted a policy of only dealing with creditworthy counterparties and obtaining sufficient collateral, where appropriate, as a means of mitigating the risk of financial loss from defaults. The Company's exposure and the credit ratings of its counterparties are continuously monitored and the aggregate value of transactions concluded is spread amongst approved counterparties.

Trade receivables consist of a large number of customers, spread across diverse industries and geographical areas. Ongoing credit evaluation is performed on the financial condition of accounts receivable and, where appropriate, credit guarantee cover is taken. The Company operates predominantly on cash and carry basis excepting sale to State Transport Undertaking (STU), Government project customers based on tender terms and certain export customers which are on credit basis. The average credit period is in the range of 7 days to 90 days. However, in select cases, credit is extended which is backed by Security deposit/ Bank guarantee/ Letter of credit and other forms. The Company's trade and other receivables consists of a large number of customers, across geographies, hence the Company is not exposed to concentration risk except in case of a STU.

The Company makes a loss allowance using simplified approach for expected credit loss and on a case to case basis.

Expected credit loss for other than trade receivables has been assessed and based on life-time expected credit loss, loss allowance provision has been made. The ageing on trade receivable is given in note 1.9.

The credit risk on liquid funds and derivative financial instruments is limited because the counterparties are banks with high credit-ratings.

Notes annexed to and forming part of the consolidated financial statements**3.6 Financial Instruments continued...****(C) Liquidity risk**

Liquidity risk refers to the risk that the Company cannot meet its financial obligations. The objective of liquidity risk management is to maintain sufficient liquidity and ensure that funds are available for use as per requirements. The Company has obtained fund and non-fund based working capital limits from various banks. Furthermore, the Company has access to funds from debt markets through commercial paper programs, non-convertible debentures, and other debt instruments. The Company invests its surplus funds in bank fixed deposit and mutual funds, which carry minimal mark to market risks.

The company had access to the following undrawn borrowing facilities at the end of the reporting period:

	March 31, 2024	March 31, 2023
	Rs. Crores	Rs. Crores
Banks and other loans		
- Secured (Barclays and Yes Bank Loans)	200.11	66.58
- Unsecured		
Total	200.11	66.58

Further to the above, the Company has an option to issue commercial paper for an amount of Rs. Nil crores (March 31, 2023 Rs.Nil crores). The Company also constantly monitors funding options available in the debt and capital markets with a view to maintain financial flexibility.

The table below summarises the maturity profile remaining contractual maturity period at the balance sheet date for its non-derivative financial liabilities based on the undiscounted cash flows.

3.6.4 Fair value measurements:

(A) Financial assets and liabilities that are not measured at fair values but in respect of which fair values are as follows:

The carrying amounts of trade receivables, trade payables, capital creditors and cash and cash equivalents are considered to be the same as their fair values, due to their short-term nature. The fair values for loans, security deposits were calculated based on cash flows discounted using a current lending rate. The fair values of non-current borrowings are based on discounted cash flows using a current borrowing rate. For financial assets and liabilities that are measured at fair value, the carrying amounts are equal to the fair values.

Goodwill arose on the 2008 purchase of Jamesstan Investments Limited. The Directors consider there is only one cash-generating unit ('CGU'), being the whole group. The Directors carried out an impairment review of the goodwill and the net investments in subsidiaries, using the same forecasts and assumptions used in the going concern review. Based on this review, the Directors concluded in 2018 full impairment of goodwill was required. No change has been made in the current year.
